Professional Summary

AWS Certified Solutions Architect and Software Engineer with hands-on experience managing and automating large-scale cloud infrastructure. Proven track record at Cognizant, supporting takeda's global enterprise AWS environments with over 800+ accounts using Landing Zones and Control Tower. Expereinced in AWS, Python, Terraform, Docker, and Kubernetes. Adept at troubleshooting critical production incidents and collaborating with cross-functional stakeholders to ensure platform reliability and security compliance.

Technical Skills

- **Programming Languages:** Python, Java
- **Cloud & DevOps:** AWS (EC2, load balancers, S3, RDS, IAM, Route 53, CloudFront, CloudWatch, lambda, Networking, Security), WAF (Web Application Firewall),Docker, Kubernetes, Terraform
- **Version Control:** Git
- **Operating Systems:** Linux (Rhel)

Certifications

- **AWS Certified Solutions Architect – Professional** (Verify)
- **AWS Certified Solutions Architect – Associate** (Verify)

Work Experience

Cognizant Technology Solutions Bangalore, India
AWS Operations Engineer (Full-Time) February 2025 – Present

- Supporting Takeda's global AWS platform with 1000+ AWS accounts organized through enterprise Landing Zones, ensuring scalable, secure, and compliant cloud operations across development, testing, and production environments.
- Managing AWS infrastructure services including EC2, S3, RDS, IAM, Route 53, Lambda, VPC, WAF, ALB/NLB, CloudWatch, security groups, and networking components while maintaining operational excellence.
- Troubleshooting critical production incidents, performing root cause analysis (RCA), and collaborating with cross-functional teams to minimize downtime and improve platform reliability.
- Automating operational workflows using Python, Shell scripting, and AWS-native services, reducing manual effort and improving operational efficiency.
- Supporting containerized applications and deployment processes using Docker, Kubernetes, and CI/CD pipelines, ensuring smooth application releases and platform stability.
- Working in a highly governed multi-account AWS environment with enterprise security controls, account provisioning processes, governance frameworks, and compliance requirements.
- Partnering with application teams, and stakeholders to implement infrastructure changes, resolve technical issues, and support cloud transformation initiatives.
